

# Freeze Effects on Asian Citrus Psyllids

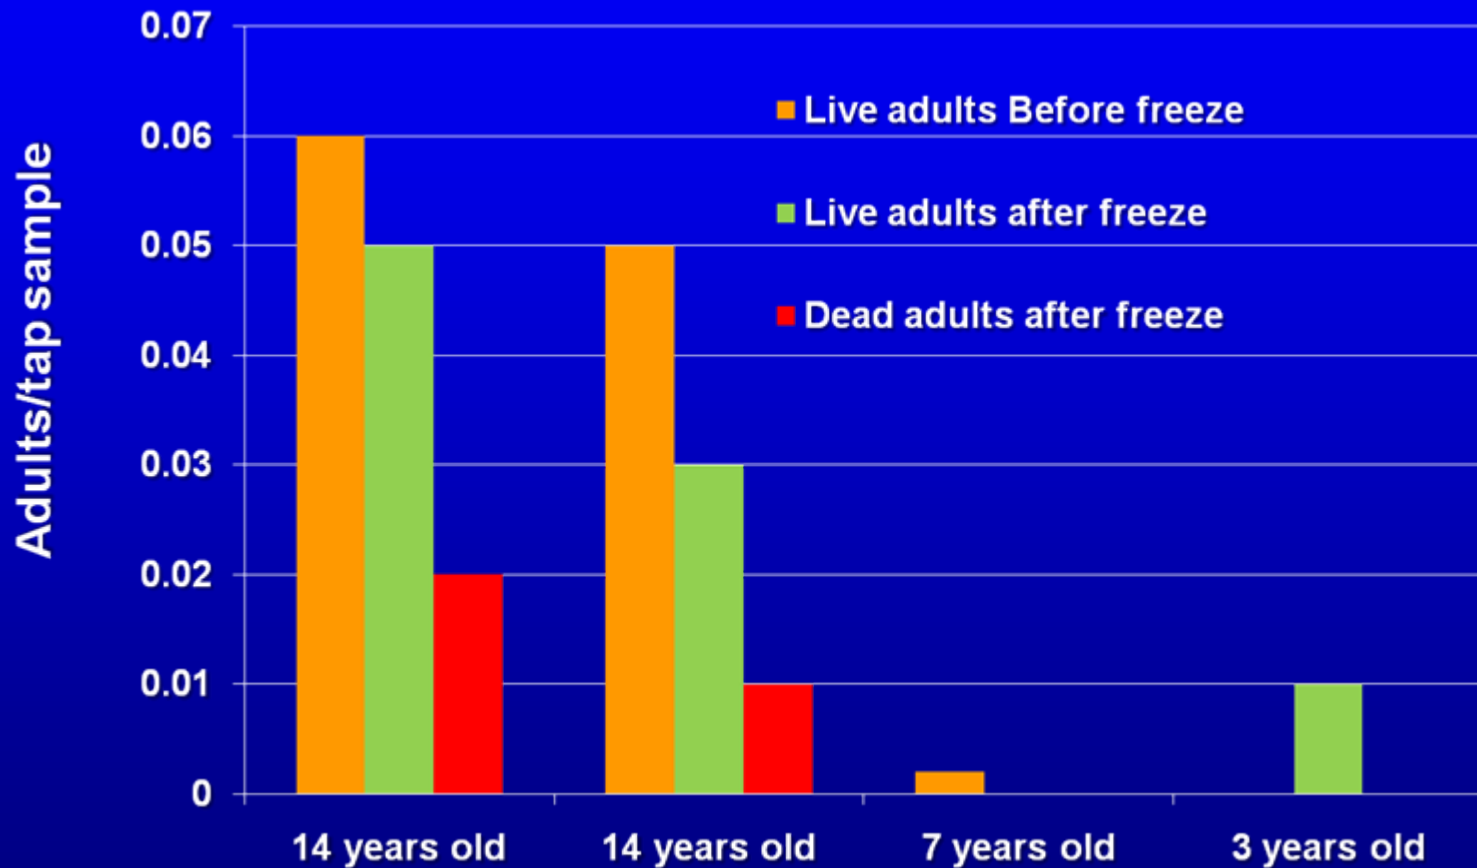

Phil Stansly UF-IFAS, SWFREC, Immokalee

# ACP on Oranges 1 Week after 11 Jan. Freeze Muse, Glades County FL, 2010

# ACP on Oranges 1 Week after 12 Dec Freeze SWFREC, Immokalee FL, 2010

# Conclusions and Recommendations

- Asian citrus psyllid has survived the worst freezes hitting Florida citrus in 2010
- Populations did decline after the freezes with no recovery until new flush is available.
- Dormant sprays are still needed to reduce populations even further
- Lower ACP populations enhance the effectiveness of dormant sprays.
- Growers are urged to stick with the program and spray for ACP this January
- The time is right to hit them when they're down!
